

Leadership and Uncertainty

From the Educator's perspective...

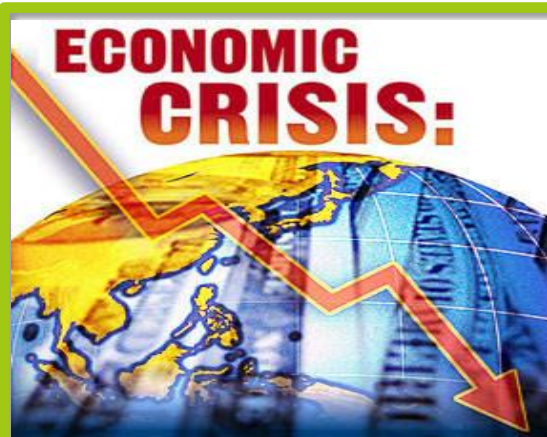

Ronald Stones OBE

Given today's uncertainties – probably the most uncertain of all times in history

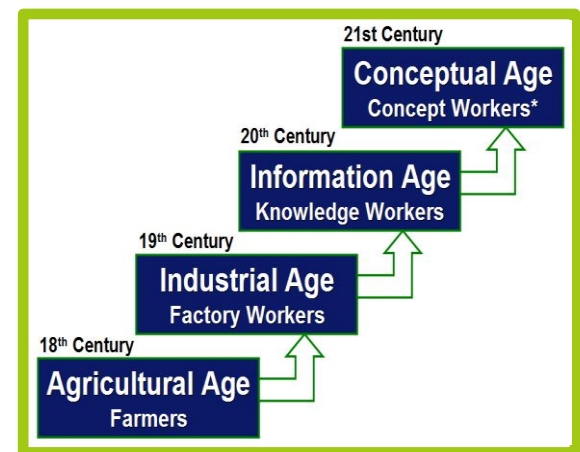

Economies and
financial and banking
systems crumbling
around us

The change from the
industrial age to the
information age to the
knowledge and
creativity age...

Employment markets
drying up and
changing at
phenomenal rate –
careers now that no-
one had dreamed of
ten years ago...

Given today's uncertainties – probably the most uncertain of all times in history

**A real concern for
what we have done to
damage the
environment, and
cries for
sustainability...**

The way we learn

**The exponential
development of
technology**

EDUCATION SYSTEMS HAVE TO CHANGE

– more of the same is not going to work

And yet, our policy makers are stuck:

- Stuck on curricula and exams which are outdated.
- Stuck on ‘success by results’.

**A model which is at the cutting edge of doing things differently:
Green School**

A pioneering project in sustainability in education

**Stunning architectural beauty out of local natural materials
creating the teaching and learning environment**

Reconnecting young people with nature

Classrooms without walls, doors, windows

Learning about sustainability through the development of habits for life

Green School is just one model....

RICHARD CHANDLER
CORPORATION

- Looking at the critical mass of the most populous countries of the world.
- Education systems which touch a small proportion – but systems based on the broken systems of the developed world.
- Nothing is happening to change the distribution of prosperity.

Call to change

- Education systems which nurture creativity; which nurture entrepreneurship...
- A change in the distribution of prosperity
- A world in which creativity flourishes...

Education is the most powerful weapon which you can use to change the world.

*Nelson Mandela
(1918 - present)*
